

## reACTIV

Small daypacks and lightweight backpacks equipped with our patent-pending reACTIV suspension are ideal for done-in-a-day pursuits or fast-and-light overnight trips. These superlight, supple packs are optimized to carry lighter loads over long distances in a short amount of time.

The reACTIV suspension is the synthesis of three unique design elements: SwingArm Shoulder Straps, the reACTIV Hipbelt and the V-Lite Frame.

### SwingArm Shoulder Straps

These groundbreaking shoulder straps move in concert with a hiker's stride by sliding through the bottom of the pack with low-friction cable and housing. Each strap is linked to the other by the cable, which maintains an even, balanced load across both shoulders.

### reACTIV Hipbelt

The ultra-flexible hipbelt in our five reACTIV-equipped packs is optimized for lighter loads and fast-and-light packing. Its floating pass-through design flexes smoothly in the vertical plane, while its soft construction allows comfort and mobility in all directions. Gender-specific shape and cant provide optimal comfort.

### V-Lite Frame

This lightweight 4 mm 6061 aluminum frame is built with a customizable anatomical contour and allows for the reACTIV suspension's flexibility.

## ergoACTIV

Backpacks equipped with our patent-pending ergoACTIV suspension are designed for fast, efficient single- and multi-day travel. Our ergoACTIV suspension provides an optimal blend of full-range motion and stable support for trips that require normal to heavy loads.

The ergoACTIV suspension is the synthesis of three unique design elements: SwingArm Shoulder Straps, the ergoACTIV Hipbelt and the V-Motion Frame.

### SwingArm Shoulder Straps

These groundbreaking shoulder straps move in concert with a hiker's stride by sliding through the bottom of the pack with low-friction cable and housing. Each strap is linked to the other by the cable, which maintains an even, balanced load across both shoulders.

### ergoACTIV Hipbelt

The key to the ergoACTIV suspension is a proprietary, custom-shaped ball joint that attaches the hipbelt to the frame. This simple, durable three-dimensional system allows the hipbelt, and by extension the backpacker, to move unrestricted in any direction. Gender-specific shape and cant provide optimal comfort.

### V-Motion Frame

This 6 mm 6061 aluminum frame is built with a customizable anatomical contour that adds stability and efficiently transfers weight to the hipbelt for heavier loads.
