

THERMA-REST®

THE TOUGHSKIN™ TECHNICAL ADVANTAGE

Therm-a-Rest's latest technical innovation is the puncture-resistant construction featured in our new ToughSkin mattresses. This design sandwiches the mattress' air-holding seal **2** between a top layer of open-cell foam **1** and a bottom layer of closed-cell foam **3**, joining them all with our guaranteed foam-to-fabric bond. Because the air-holding seal is protected by a bottom layer of closed-cell foam, the resulting mattress is extremely puncture-resistant, providing unprecedented protection from thorns and sharp rocks. And, in the unlikely event of a puncture, it continues to provide essential warmth, comfort, and performance.
